

Quod Financial Unity

Your Interconnected Trading Architecture, for Normalized,
Cross-Asset Integration and Full Order Lifecycle

Seamless and faster
integration through
Plugins

One Connected Flow
No Replacements.
No Disruptions.

Built from the ground up
with **order lifecycle**
intelligence at its core

USE CASE

Unity is the first and only architecture solution for interconnecting all trading data and workflows.

All Systems.
All Asset Classes.

WHAT IT IS

A Platform-agnostic Integration Layer

Quod Unity is a platform-agnostic integration layer that underpins your existing systems—unifying fragmented, cross-asset trading, third-party applications, and full order lifecycle processes into a normalized, real-time environment.

Unlike full system replacements, Unity eliminates operational risk and accelerates transformation by integrating your architecture, not dismantling it.

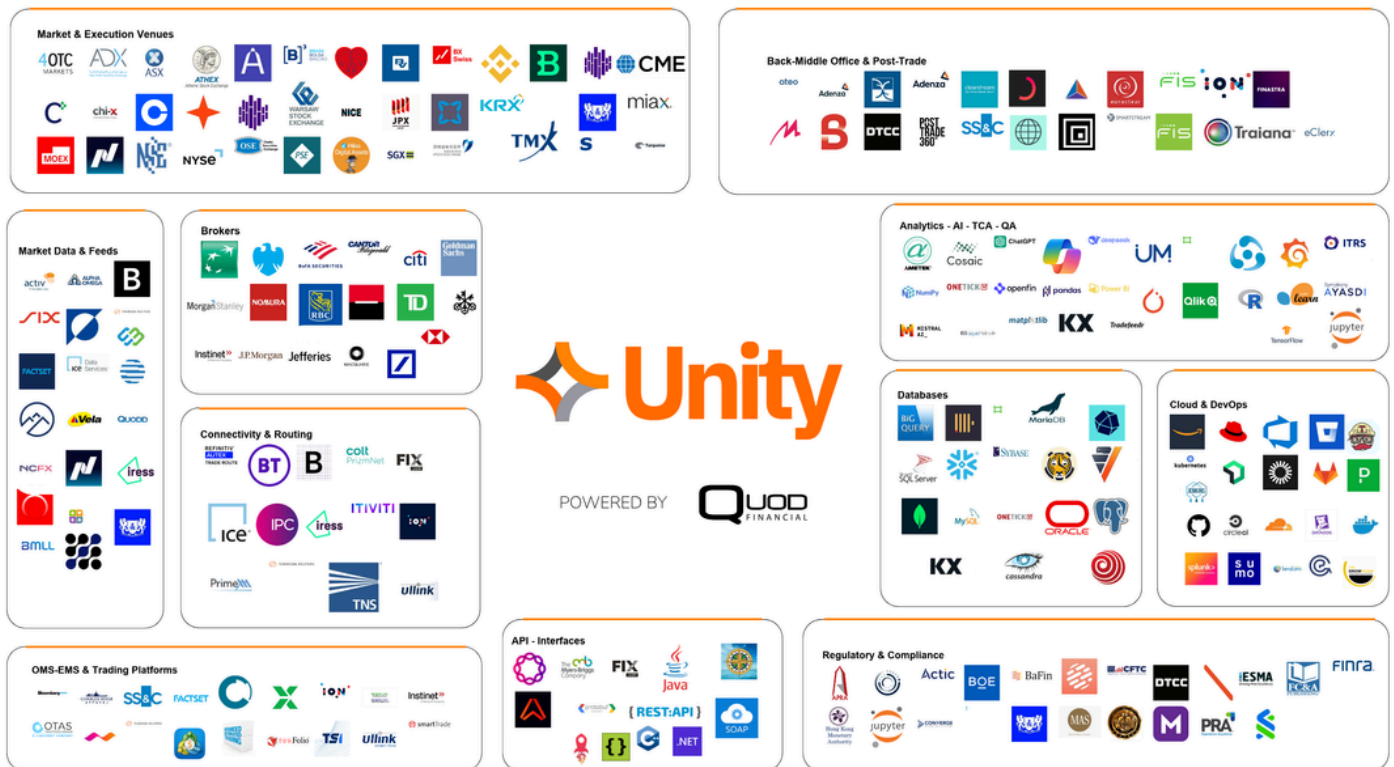

WHO IS IT FOR

The Need for Unified Trading Architecture

- Financial institutions with fragmented, legacy trading systems
- Firms seeking rapid deployment of new trading apps without vendor lock-in
- Organizations looking to reduce operational risk through real-time reconciliation and failover strategies, and complete order lifecycle visibility
- Businesses that need to evolve their technology stack—without prolonged disruption or replacement timelines

KEY BENEFITS

Cross-Asset, Normalized Integrations	Unify diverse OMS, EMS, AI tools, market data streams, and post-trade systems into a single normalized view—regardless of platform or vendor.
Rapid Time-to-Market for Trading Apps	Launch new services or vendors in days, not months, thanks to Unity’s modular, composable architecture with over 300 ready-to-deploy connectors.
Real-Time, Centralized Control	Gain complete visibility with interactive dashboards, real-time lifecycle tracking, alerts, and instant reconciliation to prevent costly errors or fragmented oversight.
Disaster Recovery Built-In	Deploy Unity as a lightweight hedge against system failures or vendor disruptions—ensuring continuous operations and business continuity.
Vendor Neutrality with Future-Proof Flexibility	Reduce vendor lock-in while maintaining a stable, single integration point that evolves with your technology landscape.

WHY CHOOSE UNITY

- Proven at scale — **300+ integrations** including Flextrade, Fidessa, Bloomberg, TT, and more
- **Seamless interoperability** for AI tools, TCA, risk management, and reporting systems
- **Composable applications** for phased adoption—adopt functionality at your pace
- **Architectural excellence:** Modular, API-driven, high-performance foundation
- **Operational efficiency:** Accelerated onboarding, real-time monitoring, exception dashboards
- **Strategic flexibility:** Lower total cost of ownership, rapid adaptability, future-ready

Unify Your Legacy
Trading Systems.
No Replacements.
No Disruptions.

REAL-WORLD IMPACT

Unity is already solving complex integration challenges for leading institutions:

AI-ready data standardization
and lifecycle visibility

Real-time risk and P&L
consolidation across asset
classes

Rapid vendor onboarding
through stable, modular
integrations
